Principles of Science at St Aidan's Catholic Primary Academy

Science is great when:

Children are questioning and exploring their surroundings inside and out using the environment.

Children carry out their own investigations using hands on activities and equipment and making predictions and conclusions from their observations.

Children are intrigued and inspired.

Children are actively investigating and evaluating topics.

It is child initiated and they can discover things for themselves.

It is fun.

Children are engaged and allowed to explore the `wow` of investigating and the `wonder` of questions.

It supports subjects across the curriculum.

Children work together collaboratively.
